CoolProp IF97 Mathcad Add-in DLL Function Verification

This IF97 Mathcad Add-in DLL is based on the CoolProp implementation of the Revised Release on the IAPWS Industrial Formulation 1997 for the Thermodynamic Properties of Water and Steam (2007) and supplementary releases for additional transport and physical properties for pure water substance. This implementation of the IF97 equations is:

- Entirely free and open-source
- Written in optimized standard C++ code so it will compile anywhere
- Fast
- Easy-to-use (just a single header)

This Mathcad worksheet provides verification of the CoolProp IF97 implementation and Mathcad Add-in DLL by comparing calculated values to tabulated values for computer program verification contained in the various IAPWS release documents.

IF97 Mathcad Functions

After copying the if97 EN.xml file to the directory

C:\Program Files (x86)\Mathcad\Mathcad 15\doc\funcdoc

the IF97 functions can be accessed through the Mathcad menus under Insert | Function..., or from the f(x) button on the toolbar. On the function panel, the IF97 functions will be under the if97 category and will all begin with the if97_ prefix.

The largest errors are in v and Cp at 22.3 MPa and 650 K and are accurate to about 8 significant figures. These are in Region 3 where the reverts lookup occurs for density. The remaining values are accurate to 8 significant figures or more. The verification values for Cv are not listed in the IAPWS documents.

Using the supplemental reverse lookup equations for density to get an accurate initial guess for pressure and then using Newton-Raphson to iterate on the original Region 3 equation increases the time to calculate density (specific volume) values in this region by a factor of about 2.6, but is far better than the factor of 17 indicated in the supplemental release document using an arbitrary initial guess.

Calculate the specific volumes using the IF97 supplemental reverse functions:

$$v'_{rev_j} := if97_vtp\left(\frac{T_{rev_j}}{K}, \frac{P_{rev_j}}{Pa}\right)$$

Relative Error

$$\varepsilon_{\text{rev}} := \frac{\overbrace{v_{\text{rev}} - v'_{\text{rev}}}}{v_{\text{rev}}}$$

$$RMS_3 := \sqrt{\frac{\left[\sum \overline{(v_{rev} - v'_{rev})}\right]^2}{length(v_{rev})}} = 5.257 \times 10^{-13}$$
RMS error is well below the 10 significant digits listed in

the tables.

$$\operatorname{Rev}^{\langle 4 \rangle} := \operatorname{v'}_{rev} \cdot 10^3$$
 $\operatorname{Rev}^{\langle 5 \rangle} := \varepsilon_{rev}$

$$\operatorname{Rev}^{\langle 5 \rangle} := \varepsilon_{\operatorname{rev}}$$

The next two tables represent the experimental data from Reference [d] (Appendix A) for water viscosity measurements [μ Pa-s] taken over the full IF97 range of temperatures and pressures. The data is presented here in two halves, but will be combined and extracted into matrices for comparison with the calculated values. Note that there is a typographical error in Reference [d] that printed the temperature ir column fourteen in the Appendix A table as 500°C, when it should have been 450°C in the temperature series.

Calculate IF97 values: $\mu_{calc_{i,j}} := \mu_{tp}(T_{IAPS_{j}}, P_{IAPS_{i}})$

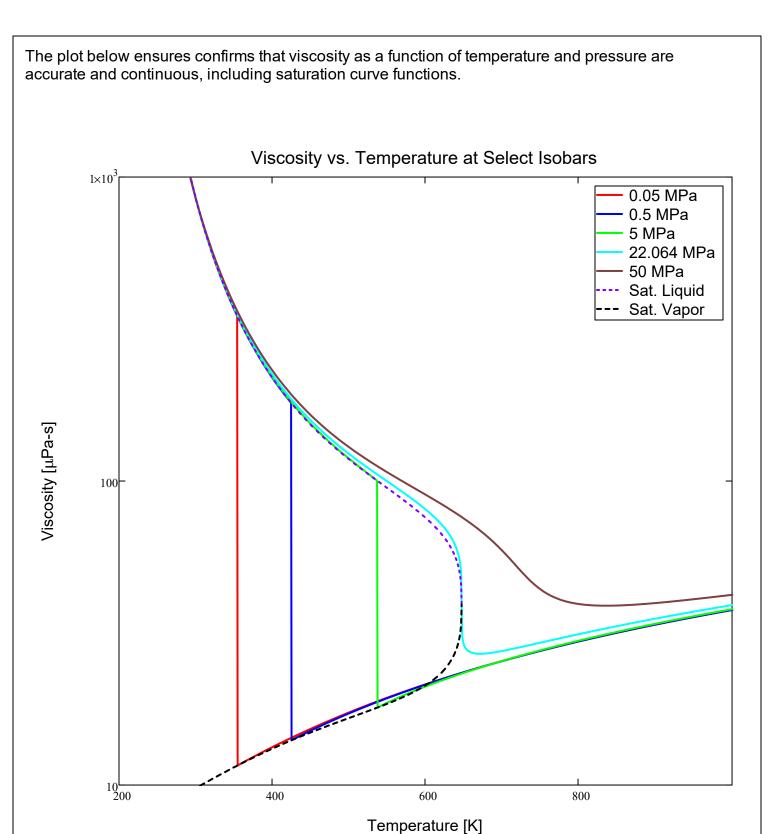

Calculate IF97 relative error: $err_{IAPS} := \frac{\left(\frac{\left|\mu_{IAPS} - \mu_{calc}\right|}{\mu_{IAPS} \cdot \%}\right)}{\left|\mu_{IAPS} \cdot \%\right|}$

 $RMS(err_{IAPS}) = 0.526771 \% max(err_{IAPS}) = 2.377 \%$

Relative IF97 Viscosity Error (%) from IAPS Experimental Data

The RMS error is around 0.5% and the maximum relative error is about 2.4% in the high temperature, moderate pressure vapor region. This maximum occurs in an area where the measurement uncertainty is between 2.6 and 3.0%. Relative error everywhere else is predominantly well below the relative measurement uncertainty of 1.4 to 2.6%.

Water Thermal Conductivity Property Verification

The next two tables represent the experimental data from Reference [f] (Appendix A) for water thermal conductivity measurements [W/mK] taken over the full IF97 range of temperatures and pressures. The data is presented here in two halves for display purposes, but will be combined and extracted into matrices for comparison with the calculated values.

Relative IF97 Thermal Conductivity Deviation (%) from 1985/2008 IAPS Experimental Data

The fairly consistent deviation from the 2008 data of around 1.217% is consistent with the shift in the 2011 correlations based on the addition of newer experimental data to the database; still within the minimum data uncertainty of 1.5%. The larger error at high temperature and pressure is relative to values that were extrapolated beyond the validity of the 1985/2008 data. High pressure data was incorporated into the 2011 formulation.

The plot below ensures confirms that thermal conductivity as a function of temperature and pressure are accurate and continuous, including saturation curve functions.

$$T_{\sigma} := M_{\sigma}^{\langle 1 \rangle} \circ C$$

$$\mathsf{T}_{\sigma} \coloneqq \mathsf{M}_{\sigma}^{\left<1\right>} \circ \mathsf{C} \qquad \qquad \sigma_{exp} \coloneqq \mathsf{M}_{\sigma}^{\left<2\right>} \cdot \mathsf{mN/m} \qquad \qquad \sigma_{u} \coloneqq \mathsf{M}_{\sigma}^{\left<3\right>} \cdot \mathsf{mN/m} \qquad \qquad \sigma_{calc} \coloneqq \mathsf{M}_{\sigma}^{\left<4\right>} \cdot \mathsf{mN/m}$$

$$\sigma_{\mathbf{u}} := \mathbf{M}_{\sigma}^{\langle 3 \rangle} \cdot \mathbf{m} \mathbf{N} / \mathbf{m}$$

$$\sigma_{\text{calc}} := M_{\sigma}^{\langle 4 \rangle} \cdot mN/m$$

Set up a unit handling function for surface tension, $\sigma(T)$:

$$\sigma(T) := if97_sigma\left(\frac{T}{K}\right) \cdot \frac{N}{m}$$

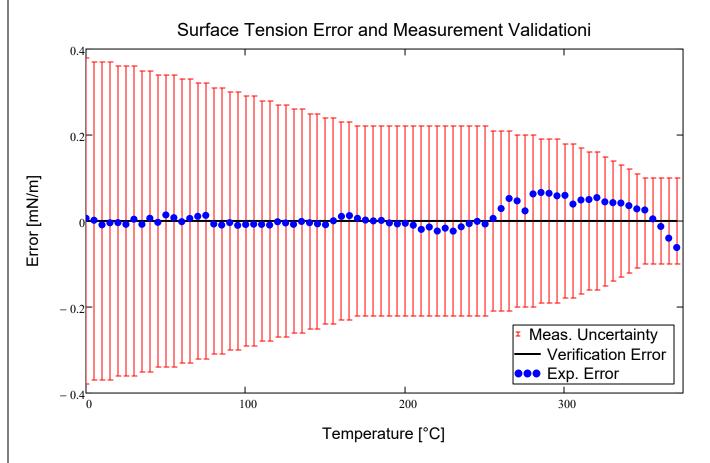

Calculate error from the published verification values.

$$\varepsilon_{97} \coloneqq \frac{\overrightarrow{Round(\sigma(T_{\sigma}), 0.01mN/m) - \sigma_{calc}}}{mN/m}$$

$$\max(\varepsilon_{97}) = 1.388 \times 10^{-14}$$

Calculate the error from the experimental values:

$$\varepsilon_{\sigma} := \overline{\left(\sigma(T_{\sigma}) - \sigma_{\exp}\right)}$$

The calculated values match the published values exactly to the published precision. The difference between the calculated values and the experimental measurements from IAPS data is within the measurement uncertainty of the data.
